October 17-18 2018
OVERVIEW
The 2018 OTA Bootcamp Course offers busy surgeons an intense review of the current state of the art of fracture management. We bring together thought leaders in Orthopaedic Trauma for case-based presentations and lab sessions that illustrate the major issues related to the management of each fracture. This course is designed for busy surgeons who treat fractures as part of their practice. The Boot Camp Course offers surgeons the chance to add practical applications to their practice and have one’s most pressing questions answered. CME credits will be awarded for your participation at this activity.

TARGET AUDIENCE
This course is intended for the practicing orthopaedic surgeon who takes emergency room or trauma call. Current techniques in orthopaedic care will be stressed with attention to appropriate soft tissue management and up-to-date implant selection. Case discussions will be used for interactive learning and audience participation.

LEARNING OBJECTIVES
Upon successful completion of this course, participants will be able to:

✓ Review current indications for operative and non-operative treatment of fractures and dislocation.
✓ Summarize the intraoperative techniques and complications related to simple and complex fracture management.
✓ Demonstrate appropriate surgical techniques, approaches and implant selections for fracture care medication and their prescriptions.
