Description

The OTA Specialty Day features an interesting and relevant agenda for trauma experts, generalists and international attendees focused on difficult clinical situations, best evidence for controversies, and highlights from the OTA annual scientific programs.

The afternoon will feature a combined session with SOMOS looking at clinical, social and economic concerns about ballistic trauma, including a panel of our colleagues who provided care during mass casualties.

Target Audience

This meeting is designed for orthopaedic surgeons and is beneficial to related allied, health care professionals. OTA has created the program based on stated needs and interests expressed from previous Specialty Day attendee evaluations.

Educational Objectives

At the conclusion of this activity, learners should be able to:

- Describe innovative techniques to manage common musculoskeletal injuries
- Discuss current controversies in the care of common fractures
- Outline and respond effectively to current issues regarding firearm injury
- Assess contemporary research evidence regarding orthopaedic trauma
